

TAURUS PRO BZ61 MIG TORCHES

Description

Taurus BZ Pro MIG torches are precision-engineered and manufactured from high-quality materials, offering the user a superior, well-designed, comfortable-to-use product that improves user performance. Nozzle walls are thicker, which enhances longevity and superior performance. Contact tips are manufactured from a high-quality, harder-than-normal copper alloy, which delivers excellent conductivity. The swan neck is durable, robust, and is manufactured from a high-temperature-resistant material, reducing the risk of shorting. The neck security block inside the handle prevents any rotational neck movement. The torches are fitted with a euro connector, which is compatible with most MIG welding machines.

General checklist to assist with the selection of a MIG torch:

- Ensure the torch length is appropriate for the welding operation.
- Confirm that the torch connection will fit directly onto the machine.

- Ensure the correct-sized tip and liner are used for the welding wire size.
- The appropriate liner should be used for the filler wire material type.
- Ensure that the correct torch amperage for the application is available.
- Confirm that the duty cycle of the MIG torch selected is suitable for the application.
