TW MIG TORCH ACCESSORIES

Description

TW MIG TORCH ACCESSORIES

CONDUCTOR TUBES

The Taurus TW conductor tube is the extended section protruding from the torch handle on which the contact tip and gas nozzle are mounted. The conductor tube delivers the electrical current, filler wire, and shielding gas on to the weld pool. Conductor tubes are also known as swan necks or goose necks.

MIG TORCH HANDLE

The Taurus TW MIG torch handle is manufactured from fully insulated nylon material for heavy-duty welding. The switch is long-lasting and designed for frequent activation.
